

Test cases:

1. Change Language
2. Create user
3. Log into account
4. Can view and search events
5. Can attend and cancel attendance
6. Change user details
7. Delete user
8. Create event and delete event
9. Change user

Test Case	Eemeli	Juho	Joonas	Jesse		Juho	Joonas	Eemeli	Jesse
1. Change language	pass	pass	pass	pass		No obvious issues were found	6. could add an option to change password	All tests passed without issues	3. Forgot log in credentials and couldn't recover them.
2. Create user	pass	pass	pass	pass			8. could add a verification message to confirm creation		Anything alarming didn't occur during tests.
3. Log into account	pass	pass	pass	pass			other tests passed without issues		
4. Can view and search events	pass	pass	pass	pass					
5. Can attend and cancel attendance	pass	pass	pass	pass					
6. Change user details	pass	pass	pass	pass					
7. Delete user	pass	pass	pass	pass					
8. Create event / delete event	pass	pass	pass	pass					
9. Change user	pass	pass	pass	pass					

The full spreadsheet of the test cases and steps can be found in the GitHub docs folder.

The test passed mostly without issues, this was thanks to previous tests during the prior sprints where we found a few problems and fixed them. For example, we found out that deleting users who had attended events wasn't possible because of links to other tables on the database. We fixed this problem then.

Heuristic evaluation

No	Heuristic	Description of the issue	Severity	Suggested Improvement
1	H1-1: Simple & natural dialog	More casual prompt on login	1	The text in the login pop-up could be more casual and welcoming.
2	H1-2: Speak the users' language	Missing instruction texts in register and event creation	2	Could add a short text that describes the form that needs to be filled.
3	H1-3: Minimize users' memory load	Long "help" button instructions	2	The instructions should be kept short and straightforward.
4	H1-4: Consistency	Settings page navigation bar is lower than in other pages	1	Move the navigation bar to same height as other pages
5	H1-5: Feedback	When save event button is pressed fields are cleared, yet user gets no indication on the success of event creation	3	Add message that tells user that the event was created
6	H1-6: Clearly marked exits	Create event page doesn't have close button or redirect action after creation	2	Add button or action that moves user away from the form
7	H1-7: Shortcuts	No shortcut to clear fields when creating a new event	2	Add a shortcut to clear all fields (for example CTRL + R)
8	H1-8: Precise & constructive error messages	Unclear error message when adding a start/end time to an event	2	The error message should display the correct time format
9	H1-9: Prevent errors	Users can create duplicate events	3	Implement code that checks if the exactly same event already exist.
10	H1-10: Help and documentation	There is no "Help" or "Info" button.	3	Add a "help" button that gives more information about the application
